ILLUSTRATOR EXECUTION VERIFICATION CHECKLIST

0. What has arrived so far

Receipt 1 (2026-07-30): ILLUSTRATOR_ORIGINAL_SOURCE_REUPLOADED, ILLUSTRATOR_VERIFICATION_COPY_NOT_RECEIVED, ILLUSTRATOR_EXECUTION_VERIFICATION_INCOMPLETE — NONE — Gate A remains BLOCKED.

The submitted file hashes exactly to the frozen accepted source, so it is byte-identical to the original and cannot be the product of an open/save/reopen cycle in Illustrator. A verification copy necessarily differs from the source it was saved from.

Receipt 2 (2026-07-30): ILLUSTRATOR_EXECUTION_VERIFICATION_FAILED, ILLUSTRATOR_AI8_ALL_OBJECTS_EMITTED_BLACK, ILLUSTRATOR_DOCUMENT_PROCESS_COLORS_BLACK_ONLY, ILLUSTRATOR_SOURCE_PROOF_COLOR_DIVERGENCE, ILLUSTRATOR_PRODUCTION_SOURCE_REGENERATION_REQUIRED — NONE — Gate A remains BLOCKED; the source is superseded by a corrected one that is itself not yet verified.

This is a real Illustrator execution result, and it FAILED. The cause is a source colour-emission defect, not an Illustrator display preference: every visible object in the accepted .ai was written as 0.0000 0.0000 0.0000 Xa and the document declared Black only, while the accepted PDF and PNG proofs committed alongside it carried the four correct colours. The source and the proofs were therefore not equivalent in colour. A corrected source has been generated from the same geometry and awaits a new human round trip; it is NOT itself verified, and Gate A has not moved.

Receipt 3 (2026-07-31): ILLUSTRATOR_EXECUTION_VERIFICATION_FAILED, ILLUSTRATOR_GATE_A_R1_ARTWORK_NOT_RENDERED, ILLUSTRATOR_LOGO_NOT_RENDERED, ILLUSTRATOR_DIVIDER_NOT_RENDERED, ILLUSTRATOR_PRODUCT_NAME_NOT_RENDERED, ILLUSTRATOR_SUPPORTING_COPY_NOT_RENDERED, ILLUSTRATOR_SOURCE_PROOF_DIVERGENCE_PERSISTS, GATE_A_R2_SOURCE_REQUIRED — NONE - Gate A remains BLOCKED.

The R1 colour repair worked - the three visible objects carry their approved colours, which R0 did not. A different defect remains: 37 of 40 objects do not reach the visible result. Measured in the repo, all 37 missing objects lie fully inside the body's bounding box and the 3 survivors are exactly those the body does not cover. That fits two explanations equally well - the body stacking above the artwork, or Illustrator discarding content after the third layer block - and this environment cannot separate them, so neither is recorded as the cause. R2 removes layer blocks and inherited state entirely, so it does not depend on which is true.

Receipt 4 (2026-07-31): ILLUSTRATOR_GATE_A_R2_INITIAL_OPEN_PASSED, ILLUSTRATOR_GATE_A_R1_ARTWORK_LOSS_RESOLVED, ILLUSTRATOR_R2_FULL_VISIBLE_ARTWORK_PRESENT, ILLUSTRATOR_R2_VECTOR_PATHS_PRESENT — NONE - Gate A remains BLOCKED.

This is the first Illustrator run of this artwork that lost nothing, and it closes the second defect: R1 rendered 3 of 40 objects, R2 renders all of them. Illustrator also built real vector objects rather than embedding the EPS - the owner reports separate Path and Compound Path items, so the compound paths carrying the counters and the medallion survived as objects. What it does NOT establish is Gate A. The returned .ai hashes exactly to the R2 source, so it is the original re-uploaded and nothing was saved, closed or reopened; a verification copy necessarily differs from the file it was saved from. Any uploaded PDF/PNG that matches this repository's own R2 proofs is likewise a re-upload and carries no Illustrator provenance. Neither upload reached this environment, so neither was hashed here.

Receipt 5 (2026-07-31): ILLUSTRATOR_R2_SAVE_COMPLETED, ILLUSTRATOR_R2_FULL_ARTWORK_PRESERVED, ILLUSTRATOR_R2_COLOURS_PRESERVED, ILLUSTRATOR_R2_VECTOR_OBJECTS_PRESERVED, ILLUSTRATOR_GATE_A_PAGE_SIZE_DRIFT, ILLUSTRATOR_GATE_A_ARTBOARD_NOT_PRESERVED, ILLUSTRATOR_ROUNDTRIP_PARTIAL_PASS, ILLUSTRATOR_EXECUTION_VERIFICATION_INCOMPLETE — NONE - Gate A remains BLOCKED.

The first genuinely different file to come back, and a native Illustrator document rather than our EPS - a save really happened. Measured here from the file itself: 40 vector objects, 39 filled plus the divider stroke, all four approved colours and nothing else, zero rasters, zero live text. The artwork passed. The page did not: 763.654 x 983.225 pt against the accepted 207.1627 x 493.2283. The ink measures the same physical height as the source, so the artwork was translated, never resized. This is a defect in the automation script, not in the artwork.

Receipt 6 (2026-07-31): ILLUSTRATOR_EXECUTION_VERIFICATION_PASSED, PRODUCTION_AUTHORITY_GATE_A_PASSED, ILLUSTRATOR_SAVE_REOPEN_EXPORT_CONFIRMED, ILLUSTRATOR_ARTBOARD_PRESERVED, ILLUSTRATOR_VECTOR_EDITABILITY_CONFIRMED — GATE A PASSED.

The round trip completed and every figure was re-measured here from the returned files rather than taken from the report: all four hashes match, the artboard is 207.162994 x 493.227997 pt, there are 40 logical drawings, 39 filled plus the divider stroke, only the four approved colours, no raster and no live text. The submitted JSON records human_result PASS with save, reopen and both exports true, no warning, and both nine-item human confirmations answered. Gate A passes.

Successful Illustrator execution must NOT be inferred from reading the EPS/PostScript text inside the .ai. The file being parseable, well-formed, or containing the expected operators says nothing about whether Illustrator opened it without repair, preserved editability, or survived a save/reopen cycle. Only a human performing the checks in Illustrator can establish that.

```

0b. The previous attempt FAILED — do not use that file

Opening it in Illustrator produced one solid black silhouette. Every visible object had been written as 0.0000 0.0000 0.0000 Xa and the document declared Black only, so the source never carried the approved colours. It is preserved unchanged for audit and is NOT production authority. Use the corrected source named below.

ILLUSTRATOR_GATE_A_PAGE_SIZE_DRIFT

ILLUSTRATOR_GATE_A_ARTBOARD_NOT_PRESERVED

ILLUSTRATOR_ROUNDTRIP_PARTIAL_PASS

ILLUSTRATOR_EXECUTION_VERIFICATION_INCOMPLETE

```

 "preserved": true,
 "overwritten": false
}
```

1. Subject

PASSED — Adobe Illustrator, by a human

Illustrator is not installed in this environment and no automated check can substitute for opening the file in Illustrator

```
{
 "subject_file": "docs/visual_quality/vq2/vq2_a2_r2_final_gate_a_r2.ai",
 "subject_sha256_16": "6ae00f726ddefda4",
 "subject_format": "FLAT_EPS_STANDARD_POSTSCRIPT_VECTOR_SOURCE",
 "verification_state": "PASSED",
 "do_not_overwrite_accepted_source": true
}
```

2. Expected structure

```
{
 "expected_layers": [
  "01_STRUCTURE_BODY",
  "02_STRUCTURE_COLLAR",
  "03_STRUCTURE_CLOSURE",
  "04_APPROVED_BBROSE_LOGO",
  "05_DIVIDER",
  "06_ROSE_LETTERING",
  "07_DAMASCENA_LETTERING",
  "08_SUPPORTING_COPY"
 ],
 "expected_objects": 40,
 "expected_logo_components": 9,
 "expected_rose_glyphs": 4,
 "expected_damascena_glyphs": 9,
 "expected_supporting_glyphs": 14
}
```

2b. Colours — every object must show one of these, none may be black

Confirm this visually in Illustrator. The corrected source carrying the right numbers is NOT evidence that Illustrator honoured them. sRGB concept artwork only — not CMYK, not Pantone, not spot, no supplier ink authority.

```
{
 "01_STRUCTURE_BODY": "#D9BDB5",
 "02_STRUCTURE_COLLAR": "#705242",
 "03_STRUCTURE_CLOSURE": "#493034",

 "08_SUPPORTING_COPY": "#502525"
}
```

3. Checks — record PASS/FAIL against every line

1. [ ] file opens without repair warnings
2. [ ] all expected layers/groups appear
3. [ ] body, collar and closure remain editable
4. [ ] logo remains 9 components
5. [ ] medallion remains intact
6. [ ] registered symbol remains intact
7. [ ] Rose and Damascena remain separate outlined glyphs
8. [ ] NIGHT REPAIR OIL remains outlined
9. [ ] counters and compound paths remain correct
10. [ ] no clipping-mask corruption
11. [ ] no fill-rule change
12. [ ] no mirrored geometry inversion
13. [ ] no font substitution
14. [ ] no raster replacement
15. [ ] no missing artwork
16. [ ] no object displacement
17. [ ] no colour change
18. [ ] no page-size change
19. [ ] no geometry drift after save
20. [ ] no unexpected flattening
21. [ ] no hidden live text
22. [ ] no linked missing assets
23. [ ] every object shows its intended colour and none appears black
24. [ ] the product is not a solid black silhouette
25. [ ] body #D9BDB5, collar #705242, closure #493034 and artwork #502525 are all present and distinguishable
26. [ ] counters are OPEN and not filled in - check the H and both R of NIGHT REPAIR OIL, the A of REPAIR, the e of Rose and

Damascena, and the P of REPAIR
27. [ ] ALL of the artwork is present - logo, registered symbol, divider, Rose, Damascena and NIGHT REPAIR OIL are each visible on the bottle
28. [ ] the count of drawing objects is 40, not 3

4. Actions — perform in order

1. [ ] Run illustrator_gate_a_roundtrip.jsx and select vq2_a2_r2_final_gate_a_r2.ai (NOT the preserved R0 or R1 sources, which both failed)
2. [ ] Confirm every object shows its intended colour and nothing is black — this is the check the previous attempt failed
3. [ ] Inspect Layers and Appearance panels
4. [ ] Select and verify each major object group
5. [ ] Save a NEW verification copy without overwriting the accepted source
6. [ ] Reopen the verification copy
7. [ ] Export a vector PDF and PNG proof
8. [ ] Compare hashes, dimensions and visible geometry
9. [ ] Record Illustrator version and operating system

5. Recording the result

Fill this in AFTER performing the checks in Illustrator. Leave passed null until every check has a real result. A null or absent value is not a pass.
