PRODUCTION AUTHORITY PREFLIGHT 1 — VERIFICATION, EVIDENCE AND GATES

What this is

PRODUCTION AUTHORITY PREFLIGHT STARTED — all five gates BLOCKED. Two owner actions required; nothing was sent and nothing changed.
Not a design stage. It defines what production authority requires and prepares the requests; it grants nothing.

1. Closed workstreams

```

```

3. Illustrator verification requirements

PASSED — cannot be performed here
Illustrator is not installed in this environment and no automated check can substitute for opening the file in Illustrator
Receipt 1 (2026-07-30): ILLUSTRATOR_ORIGINAL_SOURCE_REUPLOADED, ILLUSTRATOR_VERIFICATION_COPY_NOT_RECEIVED, ILLUSTRATOR_EXECUTION_VERIFICATION_INCOMPLETE — NONE

— Gate A remains BLOCKED.
The submitted file hashes exactly to the frozen accepted source, so it is byte-identical to the original and cannot be the product of an open/save/reopen cycle in Illustrator. A verification copy necessarily differs from the source it was saved from.
Receipt 2 (2026-07-30): ILLUSTRATOR_EXECUTION_VERIFICATION_FAILED, ILLUSTRATOR_AI8_ALL_OBJECTS_EMITTED_BLACK, ILLUSTRATOR_DOCUMENT_PROCESS_COLORS_BLACK_ONLY, ILLUSTRATOR_SOURCE_PROOF_COLOR_DIVERGENCE, ILLUSTRATOR_PRODUCTION_SOURCE_REGENERATION_REQUIRED — NONE — Gate A remains BLOCKED; the source is superseded by a corrected one that is itself not yet verified.
This is a real Illustrator execution result, and it FAILED. The cause is a source colour-emission defect, not an Illustrator display preference: every visible object in the accepted .ai was written as 0.0000 0.0000 0.0000 Xa and the document declared Black only, while the accepted PDF and PNG proofs committed alongside it carried the four correct colours. The source and the proofs were therefore not equivalent in colour. A corrected source has been generated from the same geometry and awaits a new human round trip; it is NOT itself verified, and Gate A has not moved.
Receipt 3 (2026-07-31): ILLUSTRATOR_EXECUTION_VERIFICATION_FAILED, ILLUSTRATOR_GATE_A_R1_ARTWORK_NOT_RENDERED, ILLUSTRATOR_LOGO_NOT_RENDERED, ILLUSTRATOR_DIVIDER_NOT_RENDERED, ILLUSTRATOR_PRODUCT_NAME_NOT_RENDERED, ILLUSTRATOR_SUPPORTING_COPY_NOT_RENDERED, ILLUSTRATOR_SOURCE_PROOF_DIVERGENCE_PERSISTS, GATE_A_R2_SOURCE_REQUIRED — NONE - Gate A remains BLOCKED.
The R1 colour repair worked - the three visible objects carry their approved colours, which R0 did not. A different defect remains: 37 of 40 objects do not reach the visible result. Measured in the repo, all 37 missing objects lie fully inside the body's bounding box and the 3 survivors are exactly those the body does not cover. That fits two explanations equally well - the body stacking above the artwork, or Illustrator discarding content after the third layer block - and this environment cannot separate them, so neither is recorded as the cause. R2 removes layer blocks and inherited state entirely, so it does not depend on which is true.
Receipt 4 (2026-07-31): ILLUSTRATOR_GATE_A_R2_INITIAL_OPEN_PASSED, ILLUSTRATOR_GATE_A_R1_ARTWORK_LOSS_RESOLVED, ILLUSTRATOR_R2_FULL_VISIBLE_ARTWORK_PRESENT, ILLUSTRATOR_R2_VECTOR_PATHS_PRESENT — NONE - Gate A remains BLOCKED.
This is the first Illustrator run of this artwork that lost nothing, and it closes the second defect: R1 rendered 3 of 40 objects, R2 renders all of them. Illustrator also built real vector objects rather than embedding the EPS - the owner reports separate Path and Compound Path items, so the compound paths carrying the counters and the medallion survived as objects. What it does NOT establish is Gate A. The returned .ai hashes exactly to the R2 source, so it is the original re-uploaded and nothing was saved, closed or reopened; a verification copy necessarily differs from the file it was saved from. Any uploaded PDF/PNG that matches this repository's own R2 proofs is likewise a re-upload and carries no Illustrator provenance. Neither upload reached this environment, so neither was hashed here.
Receipt 5 (2026-07-31): ILLUSTRATOR_R2_SAVE_COMPLETED, ILLUSTRATOR_R2_FULL_ARTWORK_PRESERVED, ILLUSTRATOR_R2_COLOURS_PRESERVED, ILLUSTRATOR_R2_VECTOR_OBJECTS_PRESERVED, ILLUSTRATOR_GATE_A_PAGE_SIZE_DRIFT, ILLUSTRATOR_GATE_A_ARTBOARD_NOT_PRESERVED, ILLUSTRATOR_ROUNDTRIP_PARTIAL_PASS, ILLUSTRATOR_EXECUTION_VERIFICATION_INCOMPLETE — NONE - Gate A remains BLOCKED.
The first genuinely different file to come back, and a native Illustrator document rather than our EPS - a save really happened. Measured here from the file itself: 40 vector objects, 39 filled plus the divider stroke, all four approved colours and nothing else, zero rasters, zero live text. The artwork passed. The page did not: 763.654 x 983.225 pt against the accepted 207.1627 x 493.2283. The ink measures the same physical height as the source, so the artwork was translated, never resized. This is a defect in the automation script, not in the artwork.
Receipt 6 (2026-07-31): ILLUSTRATOR_EXECUTION_VERIFICATION_PASSED, PRODUCTION_AUTHORITY_GATE_A_PASSED, ILLUSTRATOR_SAVE_REOPEN_EXPORT_CONFIRMED, ILLUSTRATOR_ARTBOARD_PRESERVED, ILLUSTRATOR_VECTOR_EDITABILITY_CONFIRMED — GATE A PASSED.
The round trip completed and every figure was re-measured here from the returned files rather than taken from the report: all four hashes match, the artboard is 207.162994 x 493.227997 pt, there are 40 logical drawings, 39 filled plus the divider stroke, only the four approved colours, no raster and no live text. The submitted JSON records human_result PASS with save, reopen and both exports true, no warning, and both nine-item human confirmations answered. Gate A passes.
Successful Illustrator execution must NOT be inferred from reading the EPS/PostScript text inside the .ai. The file being parseable, well-formed, or containing the expected operators says nothing about whether Illustrator opened it without repair, preserved editability, or survived a save/reopen cycle. Only a human performing the checks in Illustrator can establish that.

```
{
 "checks": [
  "file opens without repair warnings",
  "all expected layers/groups appear",
  "body, collar and closure remain editable",
  "logo remains 9 components",

11. Current blockers

4 OF 4 PRODUCTION GATES BLOCKED
ILLUSTRATOR_EXECUTION_VERIFICATION carries two true and distinct strings: the blocker it imposes is REQUIRED_BEFORE_PRODUCTION_AUTHORITY, and its execution state — in vq2_state.json and in illustrator_verification.state — is PENDING_HUMAN_EXECUTION.
the codes are kept as the history they are; the cause of each production block is read from the gate record (§BH46)

```
{
 "blockers": {
  "PRODUCTION_GEOMETRY": "BLOCKED_PENDING_SUPPLIER_EVIDENCE",
  "PRODUCTION_FLAT_ARTWORK": "BLOCKED_PENDING_WRAP_AND_SUPPLIER_EVIDENCE",
